

## A Week in Work

Over fall break, two of my coworkers were on vacation, so I worked more shifts than usual. The data on the back shows the shifts I worked from Thursday to Wednesday of the next week. The size of the circles represent the length of the shift (small circle = shorter shift). The location of the circle within the box represents the time of day that the shift occurred (higher circle = earlier shift). The shapes inside the circle represent customers whose orders I took during the shift. (Note: ■ = average; \* = positive interaction; X = negative interaction). The colors on either side of the circle represent my mood before and after the shift. (Note: 🟢 = tired; 🟡 = hopeful; 🟠 = angry/unhappy; 🔴 = exhausted/drained).
